

Groq API Setup Guide

This guide will help you set up your Groq API key for the assessment.

Step 1: Create Groq Account

1. Go to <https://console.groq.com>
2. Click Sign Up
3. Sign up using Google, GitHub, or email
4. Verify your email if required

Step 2: Generate API Key

1. After login, go to <https://console.groq.com/keys>
2. Click Create API Key
3. Give it a name (e.g., "compliance-validator")
4. Copy the key immediately — you won't see it again!

GROQ_COMPLIANCE_VALIDATOR

`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`

Step 3: Store Your API Key

Create a .env file in your project root:

```
GROQ_API_KEY=gsk_XXXXXXXXXXXXXXXXXXXXXXXXXXXX
```

Important: Add .env to your .gitignore to avoid committing your key.

Test Your API Key

Install Dependencies:

```
pip install groq python-dotenv
```

Test Script:

```
import os
```

```
from dotenv import load_dotenv
```

```
from groq import Groq
```

```
load_dotenv()
```

```
client = Groq(api_key=os.getenv("GROQ_API_KEY"))
```

```
response = client.chat.completions.create(
```

```
    model="llama-3.3-70b-versatile",
```

```
    messages=[{"role": "user", "content": "Say 'API key working!' and nothing else."}],
```

```
    max_tokens=20
```

```
)
```

```
print(response.choices[0].message.content)
```

Expected Output:

API key working!

If you see this, your setup is complete and ready for the assessment.

Recommended Model

Use llama-3.3-70b-versatile for this assessment.

Free Tier Rate Limits

Requests per minute: 30

Requests per day: 14,400

Tokens per minute: 6,000

Tips to Stay Within Limits

- Batch your validations
- Cache responses
- Use smaller models for simple tasks
- Add delays between requests
- Test with small batches first

Note: Rate limits reset every minute/day.

Troubleshooting

AuthenticationError: Check API key in .env

RateLimitError: Wait and retry

Invalid API Key: Regenerate key

Module not found: Install dependencies
